

ABSTRACT

5 A printhead assembly is provided comprising at least one printhead module comprising at least two
printhead integrated circuits, each of which has nozzles formed therein for delivering printing fluid onto the
surface of print media, a support member supporting and carrying the printing fluid for the at least two
10 printhead integrated circuits, and an electrical connector for connecting electrical signals to the at least two
printhead integrated circuits. The assembly further comprises a plurality of longitudinally extending electrical
conductors arranged to provide power from a power supply to the at least two printhead integrated circuits via
the electrical connector, and a casing comprising a support frame on which the at least one printhead module
15 and a mounting element are removably held, the mounting element having formed therein a plurality of
recessed channels for receiving and removably mounting individual ones of the plurality of electrical
conductors.
